When running AltiAdmin on windows XP, the view windows are difficult to read

When running AltiAdmin on windows XP, the view windows are difficult to read

When running AltiAdmin on windows XP, the view windows are difficult to read.

This is caused by using the Windows XP default theme, and can easily be corrected by changing to the "Windows Classic" theme.

Close any running AltiAdmin windows. The change will only effect newly opened sessions of AltiAdmin. Right click on the desktop and select Properties. In the Display Properties window change the Theme to "Windows Classic" Click OK. It will take approximately 15 seconds for the change to take effect. Open AltiAdmin, and the view windows should now be legible.
